

## FLUSH 100

### Following tests can be carried out

The flushability tester assesses the rate and extent of disintegration of a test material by turbulent water in a rotating tube. Results are used to assess the compatibility of flushable product with household and municipal waste water conveyance systems.

### Material that can be tested

#### All types of nonwoven WIPES

1. Facial wipes
2. Hand wipes
3. Baby wipes
4. Disposable medical devices
