

RUN-OFF TEST

Following tests can be carried out

The Run-off tester is used to measure the quantity of test liquid (simulated urine) which runs down a nonwoven test piece when a specified mass of test liquid is poured on to the nonwoven test piece superimposed on a standard absorbent media and placed in a inclined plane.

International standards applied

ISO 90733-11

Material that can be tested

All types of nonwoven product used in technical textile products
